Delonghi 3107 Instruction Manual

Please upgrade your browser to improve your experience. Follow these 4 steps to determine if your heater is in the recall. Can have variety of styles. Can have variety of styles. This site has no commercial purpose. The portable heaters don't just help save on heating costs but also electricity, as they have an automatic shutoff that is enabled when the room reaches the desired temperature. DeLonghi heaters are easy to set up and are ready to operate out of the box. The feet keep the heater from tipping over and causing damage to your home. To install the feet, place the anchor pins on the first foot and insert it into the slots on the bottom left corner of the heater. Turn the foot outward until it clicks in place. Attach the screw in the middle of the foot to secure the foot in place. Repeat the same steps for the second foot on the bottom right corner of the heater. Place the heater near a power outlet in a room. You can minimize the effects of a drafty window by placing the heater below the window, if you desire. Keep flammable materials such as furniture or cloth away from the heater. Plug the power cord into the outlet when ready for use. You can use one or both heating elements at any time, depending on how warm you want the room. When the pilot lights turn on, adjust the thermostat knob to the desired level. The heater will turn on and off depending on the temperature of the room and the thermostat setting. When the room temperature reaches the thermostat setting, the heating elements will turn off automatically. If the room temperature drops below the thermostat setting, the heater will turn on again. To clean the heater, turn off the heater and unplug the power cord. Allow the heater to cool off for several minutes. Once it is cool, wipe off the heater with a damp cloth. Dry off the heater with a dry cloth when you are finished cleaning it. Do not use cleaning supplies or abrasive cloths on the heater, as it may cause damage. Simply press the ComforTemp button for the ultimate in energy savings. The heater produces the maximum amount of radiant heat while ensuring a low surface temperature. The userfriendly control panel offers an adjustable thermostat and three heat settings to customize your heating needs. Safety highlights include a gently rounded design and thermal cutoff. Worried about your electric bill. This heater actually saves you money by automatically maintaining the optimal room temperature. Simply press the ComforTemp button for the ultimate in energy savings. The heater even produces the maximum amount of radiant heat while ensuring a low surface temperature, making the radiator a nice choice for homes with pets or kids. The userfriendly control panel offers an adjustable thermostat and three heat settings to customize your heating needs. The antifreeze setting allows the unit to automatically turn itself on when the temperature drops below 44 degrees F. Safety highlights include rustresistant durable metal construction, a gently rounded design, and a thermal cutoff function that automatically turns the heater off if it starts to overheat. With its sleek look and silent operation, the DeLonghi oilfilled radiator is the perfect solution to all your heating needs. The heating power settings on the 1500

Watt heater are Min 700W, Mid 800W, Max 1500W. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. http://fiestadrivingschool.com/phpsites/involve_audio/uploads/instron-service-manual.xml

Mark R. 5.0 out of 5 stars People unknowingly get these with the wrong expectations. This is NOT a high output, forced air heater. I will describe my use. This is where a heater like this excels. Its not going to be efficient to constantly turn it off and on all the time. Let it heat a room, then set the thermostat, and leave it. I built a 12x16 work shed, I fully insulated it R13 walls, R19 Ceiling. The front double doors are not insulated and a tad airy. I then wanted to see how low I could go, and still maintain a level of warmth. Very happy that it will maintain a warm space at that low setting with outside temps in the 30s. Its my workshop, so Im not looking to keep it 70. Its comfortable. Not super warm, and not cold at all. Im sure if I jack up the settings, I could get it very toasty in there, but It would cost more to do so. I put in a ceiling fan at the peak, which helps alot to circulate the heat around the area to keep it even. If you dont have one, use a small fan to move the air in the room. Its not for that purpose, and not how it was designed or functions. It takes time to heat that oil, and inturn, time to heat the area. Once the heater and space is warmed up, LEAVE IT. Quality product, good heat output and transfer. Highly recomended. I now have a comfortable workshop. Oh, I made sure to use a dedicated 20A outlet. You can use a 15A, but make sure not alot of other items are on that circuit. It exploded this morning with a loud hissing sound spewing hot oil on my wife feet, the carpet, walls, my bed. Our 1.5 month old daughter who cosleeps in our bedroom in her crib was in the room sleeping and thankfully my wife was awake to pull the chord out, open the windows and get our daughter out of the room.

Her feet got sprayed with a mist of hot oil which and she washed off with water soon after. Her first reaction was to pull the electrical chord out and take our daughter out of the room. The oil felt hot but it does not look like it was hot enough to burn the skin. I moved the unit out of the house and spent the next hour cleaning up the oil soaked into our carpet and various surfaces. The entire house reeks of a horrible petroleum smell. I guess we will have to rip out the carpet to get rid of the smell. The only positive aspect I can think off is that thankfully the leaking oil did not catch on fire. Terrible scary experience. I am going to contact the company to see what they have to say but felt the need to write this review to warn others. I just ordered two of the ComforTemp oil filled heaters. These ComforTemp oil filled come fully assembled, which is nice. Just open the box, slide it out, unfold the four feet and plug it up. Controls are simple. Two prong plug. There is an orange light that stays lit the entire time the unit is active. The four wheels roll easily on carpet and wood floors. They are not easy to tip accidentally. These are much heavier than the mica panels but can be used in areas with more humidity, like the bathroom. Theyre also easier to clean but slower to reach full temp than the micas. I have owned some units for years and just received two new ones today. Theyre safe and work well. Last night was 8 degrees and my house was toasty warm all night. Although I like the mica panels and my other oil filled DeLonghi heaters I have several models, I prefer these ComforTemp heaters over all the heaters I have ordered. If I had it to do all over again, I would just order these. I feel they are the safest and being fully assembled in frustration free packaging are two big pluses. They heat output is basically the same with all models.

<http://www.drupalitalia.org/node/77699>

The micas come to full heat in about 5 minutes and the oil filled take about 30 plus minutes which is not an issue for me. I feel the oil filled are much safer and I have no fears about leaving them unattended. My first order was leaking oil. Not just a minor leak, mind you. The entire box was saturated and the unit itself was covered. Ordered a replacement and while this one seemed to have all its oil securely inside, it made terrible gurgling noises like a geothermal spring. I heard the noises

coming from the next room while I was watching TV so I'm sure this is not normal. Definitely won't be trying another. This heater keeps my master bedroom very warm and my electricity doesn't go up very much. I don't even have to use throughout the night because it keeps warm pretty long time after turning off. Need to crouch down to see it. Temperature setting goes from off to 6. Can't set it above 4 as plug as cord heat and plug up. Don't want it replaced with the same model number. Want a better gauge electrical cord and easy to read heat selector dial. Have to cut cord off and send photo to get replacement which will take 14 days to receive. Liked my old one better, different model, that died but it sparked too when it got old. Can't afford to buy another. Phone Center didn't have the answers. Living with it! Then we needed a second one making a mistake not to buy the same brand. It lasted only few years. So now we bought again DeLonghi and are very happy with it. Compared to their old one it seems that it is more efficient in heat distribution. It is also slimmer while controls are basically the same. Great unit. I'm using this in close quarters in an RV. What I love most about it is that it's silent. Other space heaters with fans are noisy, and the blowing air can be distracting. This oil-filled heater emanates warmth to its immediate area so nicely. And with the choice of 700 watt, 800 watt or 1,500 watt settings, you can choose how quickly or how efficiently you want it to warm up.

<http://pepsy-massage-sexy.com/images/Creative-Nomad-Jukebox-Zen-Xtra-Manual.pdf>

There is a staycool handle on the front of it, so you can pull it around on the caster wheels. Still, it would be nice if there was a cool-to-the-touch handle on the other side of the unit, too, so you could pick it up when that might be easier. But that's a small quibble. I really like this heater. As described and kept my room warm when was below zero outside. Not bulky and nice simple design. Additional review after a year of use; Works great, we keep it on day and night in cold winter. Never once we had issue with it. Was wondering if off white color will look bad after a while, but even that didn't change. Removed the one nut that was holding the old foot on and replaced it with the new foot bracket which includes the wheels. How do I Troubleshoot a DeLonghi Convection Heater That is Not Working. By James Stevens SAVE;

Convection heaters use no moving parts. Undo the screw on the cover of the plug, using a screwdriver so you can access the wiring and fuse. A wiring diagram is a streamlined standard photographic depiction of an electrical circuit. It reveals the elements of the circuit as simplified shapes, and the power as well as signal connections in between the devices. 23. When switching the heater on for the first time, allow it to run at full power for about two hours to get rid of a possibly unpleasant smell. Make sure that the room where the heater is placed is well ventilated during this first operation. Soft crackling sounds are normal during the heaters first operation.
