Download for free today. Comark has a number of Pocket Digital and Pocket Dial Thermometers that can be calibrated to ensure accurate temperature readings. The goal of the calibration is to verify that the displayed reading you are getting is an accurate one and for such devices a simple crushed ice solution can be used, to calibrate the thermometer to zero degrees Celsius, or 32 degrees Fahrenheit. Pocket Dial Thermometers For detailed instructions on the field calibration of your Comark Pocket Dial Thermometer, please select this option. Wait at least one minute for the sensor to reach equilibrium. Wait at least one minute for the sensor to reach equilibrium. By holding the hex nut securely with a wrench or pliers, the Thermometer can be adjusted until the pointer reads the desired

temperature. <http://freecougarcontacts.com/uploads/userfiles/capspray-9900-manual.xml>

You will need a second Thermometer, either glass or digital, to verify the control temperature. Put some water and crushed ice into a clean mug or water bath approx 60% crushed ice to 40% water. Insert the thermometer into the ice solution until the stem is covered to at least half way along its length. Wait for the reading to settle. A crushed ice solution typically contains approximately 60% crushed ice to 40% water. First, you will need a suitable container A 250 millilitre, or eight ounce container, would be ideal. Next you will need to crush enough ice to fill the container. Don't be tempted to use uncrushed ice, such as standard ice cubes. Once the container is full, pour in cold water until the surface starts to turn from ice white to slightly grey in colour. The ice on the surface should show just a small amount of water and not an excessive amount, so push down firmly on the ice and pour off any excess. Essentially the ice should still be allowed to float. Your Ice Point is now ready for use and can be topped up as necessary, depending on how long it's needed. Simply add more ice but remember to drain any excess water. To start the calibration check, simply immerse the probe of your thermometer into the solution, so that it is at least 2.5 centimetres, or 1 inch, below the level of the water in the crushed ice solution. You should not allow the probe tip to rest on the bottom or the sides of the container. Now you need to wait for the reading on your thermometer, to become stable. We would normally expect a reading to show, that is within 1 degree of zero degrees Celsius, or within 2 degrees of 32 degrees Fahrenheit. Download for free today. By using the maximum hold button, you can switch between the maximum reading and the current temperature reading. The DT400 Pocket Thermometer can be used for food temperature checks and the thin tip probe gives a response within 6 seconds.

It is a waterproof thermometer and durable enough to use for checking the final rinse cycle temperature of commercial dishwashers. The unit will automatically power off after 35 minutes to save battery life. Press the button again to return to normal operation. Battery Removal Use a screwdriver blade or coin to turn the battery cover counter clockwise for removal. Replace the battery and turn the cover clockwise until tight. Field Calibration Procedures 1. Thanks!ANSWER Hello, according to the manufacturer the back of the thermometer removes to expose the battery for replacement. To open it, stick an item such as a penny in the hole on the back of the thermometer, and give it a quarterturn. They said that it is a gasket opening, so it may not just pop right open.It is used on a daily basis as many as fifteen times in concrete. Is completely weatherproof as I clean it after each reading with water by just a quick submersion rinse and then a dry rag. Have had other products but not as good as this one. I can turn the black circle but I cant get it off. ANSWER Hello, according to the manufacturer it is only about a quarterturn to open the battery compartment, and if it will not open after that, try rapping it on the counter for the cover to pop out. Sadly, these were packaged without the sleeve why I'm giving 4 stars instead of 5. However I had saved the sleeve from a couple of thermometers that quit working. In an environment where splashing liquid is likely, the sleeve offers a lot of protection. It performs perfectly. The power button which cycles from Fahrenheit to Celsius stuck, so it would never turn off. Your mileage will obviously vary, but it seemed pretty fragile to me. I replaced the batteries and still no go. Todo muy bien, excelente precio y servicio. Esta marca tambien la usan en restaurantes internacionales asi que me dio confianza. This one was definitely worth the 20 bucks and has only had a battery replaced once. We have some other, less expensive ones, but this has been the go to thermometer for years. The "waterproof" claim hasn't been my experience and if the upper portion gets wet from dropping it something the display will come and go and it takes a little time to get it dry and working properly again.

It gets a fair amount of home use and the battery has been replaced once. It's a quick read and it really doesn't take long to have it settle in on a temp. We make our own ice creams and heating is often required but the batch has to cool to a certain temp before you can go to the next step and this is excellent for that purpose. After this many years it deserves 5 stars for accuracy, durability and not dying an early death. We also use it to make yogurt and knowing the room temperature is part of the process and this worked well for that also. We just replaced it with another PDT300 rather than taking a chance on something else just to save a few bucks. It is fairly fast at reading the temperature of what I am baking with in a few seconds and I don't have to puncture the bread so deeply to get an accurate read. The thermometer turns on easily even when my fingers are hurting from arthritis. It switches over from Celsius to Fahrenheit with ease just read the direction it is all in the on off switch, keeping it simple. It washes up easy and stores away with my other bread making items so it is easy to find. I love this little thermometer and definitely recommend it to anyone who uses a thermometer for cooking or baking. It has been my handy dandy companion at Thanksgiving when I make the perfect Turkey, with Filet Mignon, with roasted chicken, with halibut, with just about anything that needs or you may want a temperature read on. You will not be disappointed. Switched between C and F very easily. Since it arrived it has the display has been stuck on "OFF". However, the "OFF" never goes away even when not in use. It is my understanding that it should

automatically power off after 30 minutes. I left mine over night, and it has remained on whilst displaying "OFF" on the screen. Even though it displays "OFF" it is still using the battery. I feel that this is a bad idea due to the fact that these are stored to be used daily.

With the display never turning off the battery decreases even faster than normal. I will put it to use and see if they can gain a couple stars with efficiency and effectiveness. It quickly shows the accurate temperature, is about 5 seconds. Other devices I have purchased sat there and slowly crept up to get to the proper temperature. This is the second one of these I have had, the other one finally wore out exposing the buttons after about 4 years of use. But worked the whole time. Would recommend this to others looking for a quick accurate reading. Even then you just have to let it dry out some and it works. I just bought a replacement to have on hand when this one finally goes, but it could be years. I no longer get false readings as I. This device is very easy to use, has very fast response, is accurate and leaves a very small hole where you take the reading. The plastic cover over the power button is cracked but doesn't affect its operation. I would buy this thermometer again. I now always have the perfect steak. I swim in a lake and use it to check the water's temperature. After a short dip in the water the whole thing was in the water it started to swallow water, the display was ruined, the numbers were all wrong and it stopped working. Total waste of money. Why sell a waterproof product when it's not waterproof? Sorry, we failed to record your vote. Please try again. It is a very compact unit with quick response time and a very small probe which makes it easy to get right into the middle of any food. I've had other probes in the past and this one is by far the best I've had. Sorry, we failed to record your vote. Please try again. I left the first one on the baking tray and melted it. However, this is a great food thermometer all the same and I know they are used in many pub kitchens. Recommended. Sorry, we failed to record your vote. Please try again. Also good for jam making. Sorry, we failed to record your vote. Please try again. It seems a bit pricey but after 5 different pocket thermometers, I would go with this from the beginning. It has a fast reading display, you only need to use the tip of it to have a measurement. The product is NSF certified. Personally is the best product for what you pay. I have not tried to put it on the dishwasher, but I don't think it is necessary to clean it. Sorry, we failed to record your vote. Please try again. Other benefits include an automatic poweroff function that saves batteries, and BioCote antimicrobial protection to help keep it clean. The procedure is quick and simple. Very useful and appears to be very accurate, but ready to calibrate anyway. Review by Christine Binfield. Review by Dave Aberdeen. Nice to see service like that and will buy from here again. The thermometer does the business intended and has multiple uses in the home. Very useful for general culinary purposes. I use

it mostly for water temp. The customer service is absolutely outstanding. They have solved a problem for me while being very friendly and even covering the extra postage costs. Review by Bill Nottingham I use mine for homebrewing and it's perfect. Review by Mark Leeds The thermometer itself is a breeze to use, very responsive and accurate when compared to my laboratory spirit thermometers. Review by Nigel Portman South Wales.
